SmartFill Optimizer

Our solution for collecting data to reduce box sizes

The Smartfill Optimizer is a scanning tool designed to minimize packaging materials and void fill materials. It collects data of the highest product in a box and provides recommendations for alternative box sizes that reduce empty space.

Boxes are scanned and their dimensions are stored for real time insight. Over a longer period the stored data is analyzed to reveal the most cost effective box type and necessary packaging materials.

Connectable with the FROMM IIoT-Platform for remotely monitoring.

System-setup:

Decision making tool to:

- Reduce box size
- Reduce void fill material
- Reduce transport costs

Item code: 50.100253

 Encryption of condition monitoring data according to **modern security standards**, no collection of personal data.
